Strategy & AI Architecture Consultant Nov 2023 – Present

David Facer Consulting · Provo, UT

Expertise: Market strategy & alignment; Business architecture; AI-native architecture; Change management (current-state to future-state transformation); AI SaaS Product Management; RAG/eval/observability design; AI-Native SDLC development; SMB methodology right-sizing

Methods & Tools: TOGAF ADM adjusted for SMB; AI-Native SDLC Maturity Model (author); Prolific fast prototypes: VS Code; Claude Code; GitHub; Vercel; Celigo; Make; OpenClaw; Gemini; OpenAI; Copilot

Accomplishments: Created the AI-Native Enterprise Operating Architecture, an enterprise architecture framework of function models, maturity models, and rigorous assessments. The maturity models are public and licensed CC BY 4.0. Strata, the governance plane I built, is described at aimaturitymodels.com/strata/. Designed & executed business transformation and strategic alignment for SaaS EdTech organizations, carrying each client from current-state assessment to a defined future-state operating model. Codified product management and platform design for AI-native software delivery. Architected RAG/eval frameworks, multi-tenant AI infrastructure.

Director of Product Management – Digital Platforms & Platform Data May 2021 – Nov 2023

NICE InContact · Salt Lake City, UT

Expertise: Enterprise architecture; Data architecture & ontology; Omnichannel customer service platform integration (Brand Embassy); AI-powered knowledge management integration (MindTouch/CXone Expert); M&A portfolio rationalization & platform integration — technology & people; Snowflake enterprise data ontology; 3rd-generation omnichannel/digital reporting platform; Organizational change management (state-to-state platform transformation); Multi-geography PM team leadership (Prague + Utah); SaaS platform application/data architecture; Multi-channel communications integration (data & voice); Platform API ownership; Telephony & WFM integrations; GTM & sales readiness; Sales engineering

Methods & Tools: TOGAF ADM; TOGAF data architecture; Snowflake; MS Teams; MS Office tools; Jira/Confluence

Accomplishments: Led two sequential M&A integrations, each a portfolio rationalization and platform integration effort — consolidating acquired capabilities onto the core CXone platform architecture rather than running them as parallel products: (1) Brand Embassy — Prague-based omnichannel customer service platform (social media, mobile messaging, live chat, AI-powered chatbots), acquired by NICE in 2019 but still at arm's length on arrival, with API handshakes and clunky interface handoffs as the current state; managed 3 PMs across Prague and Utah to move the platform from that fragmented state to a unified UI on the main platform stack; simultaneously architected the CCaaS data ontology on Snowflake as the enterprise data foundation for omnichannel and digital interactions, enabling the 3rd-generation reporting platform and enterprise data integration — resulting in retention of key customers; hired a PM to own ongoing data work once the hard architectural problems were solved. (2) MindTouch/CXone Expert — AI-powered knowledge management engine ensuring agents on any channel had access to the same knowledge base as self-service chatbots. Together, Brand Embassy + MindTouch carried old inContact telephony infrastructure from its legacy current state to a digital-first, AI-assisted future-state CCaaS platform. Expanded international customer base 60%; global revenues 20%. Mentored new product managers. Served as informal Chief of Staff

to the Head of Product for the multichannel organization. Second time defining this platform's data ontology, a decade apart: authored the ontology behind 2nd-generation data storage and reporting at inContact (2009–2011), then the Snowflake ontology behind 3rd-generation reporting here — evidence of durable architecture and renewed organizational trust.

Head of Product & Platform

Sep 2018 – Feb 2020

Finch · Salt Lake City, UT

Expertise: Market strategy & alignment; Business architecture; Product & portfolio management function; Zero-to-one organizational change management; SaaS product development & product architecture; ML & AI product ownership; Build vs Buy decision frameworks; Predictive-AI full-funnel demand-gen methodology (search + display); Display advertising portfolio expansion; Google Ads / DSP product strategy

Methods & Tools: Demand Gen Marketing Maturity Model (author); Agile/Scrum; Jira; The Trade Desk

Accomplishments: Brought formalized portfolio discipline to a growing startup to position it for acquisition, moving the organization from an undefined current state — no product function — to a defined future state with org structure and delivery cadence in place. Authored Demand Gen Marketing Maturity Model. Implemented formalized Agile SDLC & PDLC. Developed transformative sales enablement. Managed data scientists, architects, engineers directly. Built the product function in an environment with no pre-existing PM discipline, establishing both the org structure and the artifacts (roadmap, requirements, SDLC/PDLC cadence) simultaneously rather than inheriting either. Productized an existing real-time Google Ads bidding capability and expanded the portfolio to include Display ad buys on the demand side, bringing display advertising into the predictive-AI full-funnel methodology. Demanded and drove the full-funnel orchestration connecting both under a single predictive model — delivering converged acquisition-to-conversion optimization that neither capability could achieve independently.

Strategy Consultant

Jun 2017 – Sep 2018

David Facer Consulting · Salt Lake City, UT

Expertise: Industry & analyst advisory; Board-level strategy input; Market positioning & strategy for key clients

Methods & Tools: Market maturity model; TOGAF ADM sized for SMB; EdTech Market Maturity Model

Accomplishments: Advised analysts, board members, and past clients on state and strategy of CCaaS and EdTech markets during a period of transition. Maintained continuous market and client relevance during a deliberate lower-intensity period, preserving relationships and domain currency.

Vice President, Platform Systems Development

Feb 2015 – Jun 2017

West Corporation · Omaha, NE

Expertise: Enterprise architecture — full TOGAF ADM cycle at business-unit scope; Business, information systems & technology architecture; Architecture governance & change management; SDLC/PDLC decomposition (L1–L3); CXLM; Change management leadership (current-state to future-state transformation); SAFe rollout; Six Sigma/Lean/Kanban; PMO governance design; M&A integration

Methods & Tools: TOGAF ADM; CMMI; SAFe; Six Sigma; Kanban; Jira; Aha!; MS Office tools; SOA

Accomplishments: Ran the full TOGAF ADM cycle across the business unit — architecture vision; business, information systems, and technology architecture; opportunities & solutions; migration planning; implementation governance; and architecture change management. Quadrupled release velocity. Cut quality defects 75%. Designed architecture and delivery governance artifacts adopted as PMO standard. Owned CXLM initiative, C-suite through delivery. Formally led Engineering (5 Directors); informally retooled 2 newly-installed VPs of Product Management and their teams as de facto Chief of Staff to the SVP. Led the resulting

multi-year transformation roadmap: baseline (current-state) decomposition, target Enterprise & Business Architecture, gap analysis, and matrixed Six Sigma/Lean/Kanban across 3 functional divisions and 2 business units, carrying the org from six-sigma waterfall discipline as its current state to a defined Agile-informed future state. Process design remains West's standard for cross-functional/cross-BU work.

Director of Platform Development May 2013 – Feb 2015

eLoyalty, a TeleTech Company · Salt Lake City, UT / Austin, TX

Expertise: Product & Engineering ownership; On-prem-to-SaaS migration architecture (Cisco); Operating model design (product management, SDLC, CI/CD, XP); SOA architecture; CI/CD; Agile XP/Scrum hybrid; Change management (services-to-SaaS operating model transformation); Multi-tenant platform architecture

Methods & Tools: Agile/XP; CI/CD; Scrum; Cisco UC; MS Teams Server; MS Office tools; MS Visio

Accomplishments: Owned Product and Engineering for the business unit. Architected and led the migration from on-premises Cisco deployments to multi-tenant SaaS running on Cisco infrastructure, built on a multi-tenant Cisco overlay. Built the delivery operating model from scratch — product management function, SDLC, CI/CD, and Extreme Programming (XP) — standardizing dev environments and integrating QA. Migrated the entire business unit of an $800M white-glove services firm to SaaS productization, moving it from a services-led current state to a productized future-state operating model. Established CI/CD maturity still running in full continuous delivery today. Solved the platform/integration/delivery-commitment triad common to organizations entering Cloud/SaaS for the first time.

Director of Product Management – Photoanalysis Platforms Nov 2011 – May 2013

Hewlett-Packard · American Fork, UT / Palo Alto, CA

Expertise: Waterfall-to-Agile organizational transformation; R&D productization; public REST API platform (SOA); High-volume imaging platform architecture (millions of API calls/day, photo output); developer platform at scale

Methods & Tools: REST/SOA; Agile/XP; CI/CD; Git/Jenkins; Jira; MS Office tools

Accomplishments: Owned the internal imaging platform serving HP's enterprise printing business units — a public REST API handling millions of calls daily, each producing processed photos for HP printing customers. Productized HP Labs R&D photo analytics algorithms into that API and architected it for sustained, image-heavy throughput at that volume. Led the Waterfall-to-Agile XP transition, carrying the engineering org from a current state of 15 hrs/week in meetings to a future state under 3, with CI/CD in place. Demonstrated that internal R&D output could be productized into an externally-consumable platform without compromising the pace of internal use.

Director of Platform Product Management Jan 2009 – Nov 2011

inContact · Salt Lake City, UT

Expertise: Enterprise API architecture (data, real-time, interface integration); API governance — throttling & billing instrumentation; Data architecture & ontology (2nd-gen storage, integration, reporting); Enterprise portfolio management; Enterprise CI/CD & XP rollout; Platform architecture innovation; Work-item routing abstraction design (inventor); Stateful real-time routing systems; Platform APIs & partner integrations (Salesforce, Verint, Qlik); Developer relations / partner enablement; Agile process ownership; Universal backlog management

Methods & Tools: SOA; REST; Salesforce; Agile XP; CI/CD; Enterprise portfolio management; SFDC Apex; Jira; MS Office tools

Accomplishments: Owned the entire external API surface — data, real-time, and interface-integration APIs — plus partner integrations with Salesforce, Verint, and Qlik. Implemented API throttling and billing

instrumentation, making the API layer a governed, metered platform. Owned the data ontology initiative that enabled 2nd-generation data storage, data integration, and 2nd-generation reporting. Invented work-item routing — generalizing the platform's voice, email, and chat routing logic into a single abstraction capable of routing any tracked item on a partner's system, regardless of type. This extended core platform capabilities into customer platforms and applications, and the architectural breakthrough became the tipping point for NICE's later acquisition of inContact. Implemented CI/CD, Extreme Programming (XP), and enterprise portfolio management across the enterprise. Hosted webinars teaching customers and partners how to consume the APIs the team owned. This dogfooding discipline — holding internal and external API consumers to the same standard, and personally training partners on consumption — predates 'developer relations' as a named discipline by roughly a decade.

Director of Product & Platform Operations

Sep 2006 – Jul 2008

K12 / Power-Glide · Provo, UT / Herndon, VA

Expertise: Zero-to-one platform architecture (SOA); M&A technology integration; K–12 curriculum product development; 400,000+ K–12 language learners served; M&A positioning; M&A due diligence; M&A technology provenance; Acquisition integration (sell-side)

Methods & Tools: SOA; ASP; REST; PDLC; SDLC; Git

Accomplishments: Architected the platform from zero to one: relaunched on SOA within five months, preserving the company's viability, and released an integrated LMS and specialized gradebook a month later. Led K–12 language curriculum product development serving 400,000 learners; one-third of team were teachers; customers were nonprofit charter schools. Positioned the company for acquisition and built the deal from MOU through technology and provenance documentation. At close, became a K12, Inc. employee and spent the next six months executing the integration personally. Diligence and provenance documentation produced here became the template later applied from the buy side at West Corporation and NICE InContact.

Product Manager

Jun 2005 – Sep 2006

a la mode, inc. · Salt Lake City, UT

Expertise: Early Agile adoption; "4 in a box" cross-functional delivery discipline; Weekly release cadence; Product line turnaround; Revenue recovery; SOA; ASP (pre-SaaS era)

Methods & Tools: Pragmatic Product Management; Agile product management; MS Office tools; Adobe Fireworks

Accomplishments: Turned losing product line into $500K/year contributor in six months. Completed Pragmatic Product Management seminar. Early adopter of Agile methodologies: instituted Agile SDLC with "4 in a box" cross-functional discipline (product, development, QA, UX) and weekly releases. Earliest evidence of the product-discipline-as-business-strategy thesis later formalized in current consulting practice.

Education

BS/BA, Marketing, Finance, Economics · University of Utah, Salt Lake City, UT · May 2005
